Jabra BT800 – the ultimate,
fully-featured Bluetooth® headset

The world's most advanced Bluetooth headset is also the first to combine DSP, visual display, ring tones and call vibrate alert and is styled to complement modern phone design.

RELEASE YOUR JABRA

Jabra

The Jabra BT800 – a revolutionary combination of design and cutting-edge technology

With the Jabra BT800 your phone becomes the accessory!

With innovative, simple to use features, you get the same feeling of familiarity as using your mobile phone.

All the features and operations you're familiar with on your mobile, are now available from the headset. Using just four controls – mute button, jog wheel, 'Answer' and 'End' buttons – easy to access features are natural. For example, the jog wheel can be used for scrolling through menu functions in standby mode and becomes the volume control during a call.

The blue backlit display is unique to the Jabra BT800 and shows 'Caller ID' on incoming calls so you know who's calling – no need to look at your phone. You can also view the phone's call list and menu options.

DSP provides outstanding audio quality

The Jabra BT800's unique DSP (Digital Signal Processing) means that, whatever the environment, you are assured optimum audio quality. DSP's automatic volume control compensates for noisy surroundings by increasing the listening level accordingly. Noise cancellation allows the incoming caller to hear more clearly.

The Jabra BT800's call vibrate/ring tone function enables selection of your favorite ring tone from the headset. If you prefer, simply set the Jabra BT800 to 'vibrate only', to silently know when a call is coming through.

The Jabra BT800 is like no other headset – a revolutionary combination of design and technology engineered for freedom.
